

Mathematical Astronomical Morsels IV

Table of Contents

Notes on Dates and Time Reckoning

The Moon

- 1 About the phases of the Moon
- 2 Northernmost and southernmost Full Moons
- 3 Full Moon and opposition in right ascension
- 4 The Moon as a boat

Eclipses

- 5 Total solar eclipses of long duration in the United States
- 6 Total solar eclipses of long duration in Europe
- 7 The total solar eclipse of 2015 March 20 at the North Pole
- 8 The maximum possible duration of an annular solar eclipse
- 9 Solar eclipses with long “complete” duration
- 10 Central line and maximum duration of totality
- 11 Wide paths
- 12 When only a part of the shadow passes over the Earth
- 13 Central eclipses at midnight
- 14 About the speed of the Moon’s shadow
- 15 The length of the solar crescent during a partial solar eclipse
- 16 Proliferation of local solar eclipses
- 17 The period of 112 years
- 18 About successive partial solar eclipses
- 19 A “strange effect” at eclipses and occultations
- 20 A new type of solar eclipse
- 21 Solar eclipses: a region of visibility with two nodes
- 22 Tetrads and solar eclipses
- 23 Saros and Inex series of lunar eclipses
- 24 The length of Saros series and the frequency of solar eclipses
- 25 Remarkable distributions of eclipses
- 26 About partial solar and lunar eclipses
- 27 Intervals between lunar eclipses
- 28 A special type of lunar eclipse
- 29 Lunar eclipses and Full Moon
- 30 Northernmost and southernmost lunar eclipses

Occultations

- 31 About the occultations of Antares, Aldebaran, and Beta Tauri
- 32 Groups of occultations of planets
- 33 Occultations of bright stars by Jupiter and Saturn
- 34 Uranus, Neptune, and bright stars

Planetary Motions

- 35 Asteroids of the Hilda group
- 36 The minor planet Thule
- 37 Hidalgo and friends
- 38 Pseudotrojans
- 39 Periodicities in the world of the minor planets
- 40 About the orbital inclinations of the asteroids

Planetary Phenomena

- 41 The motion of periodic comet Halley
- 42 True and angular distances
- 43 About the visibility of Mercury
- 44 On the greatest elongations of Mercury and Venus
- 45 Nearly-simultaneous inferior conjunctions of Mercury and Venus
- 46 More about the Venus-Jupiter conjunctions
- 47 About the conjunctions of Mars
- 48 Mars and the Pleiades
- 49 Quintuple conjunctions
- 50 Planet-planet oppositions
- 51 Trying to solve the problem
- 52 Playing with orbital elements
- 53 Satellites of Jupiter: simultaneous greatest elongations
- 54 When a satellite occults a shadow
- 55 The wrong periodicity of d'Arrest
- 56 Transits of Earth as seen from Jupiter
- 57 Ring sighting

Varia

- 58 Decreasing right ascensions
- 59 A calendrical problem
- 60 Delta T
- 61 The puzzling relation between sidereal time and Universal Time
- 62 About the latitude of the Sun
- 63 The declination of the Sun at the equinoxes and at the solstices
- 64 The dip of the horizon and the times of sunrise and sunset
- 65 About the rate of change in daylight length
- 66 How long is the Earth's shadow cone?
- 67 The 13th day
- 68 Peculiarities about minor planet names

Index
